

Title: QA Engineer
Based in: Stockholm, Sweden

Ad Player QA Engineer, Stockholm

Background

At Videoplaza, we build the next generation ad management platform dedicated to IP-delivered video. What we develop is a driving force behind the biggest shift in the consumption of moving images since television was invented. Our platform is used by clients all over the world to monetize video experiences across PCs, mobile devices, tablets, IPTV and Connected TVs. We now seek an experienced and skilled QA Engineer to join our team of exceptional developers and help us shape the New TV world.

What we do

Millions of people view ads delivered by our platform every day. That means millions of users run code we write every day. They do it across multiple platforms and devices, using a multitude of technologies and they do it with zero tolerance for bugs and issues. Assuring that our client side ad players work as expected across all our supported environments is a complex challenges that make QA work at Videoplaza really interesting and rewarding. To be able to do all this with limited resources we use the best frameworks and tools out there or, when they are not good enough, we write our own.

How we do it

As an Ad Player QA Engineer you would join our QA team but be working closely with the Ad Player team that develops all our player plugins running inside our clients' video players. We develop ad players and SDKs for Flash, HTML5, Silverlight, iOS and Android based video players. You would be exposed to and required to understand all these development environments in order to fully plan for and assure the quality of our ad players. We believe firmly in automating as much of the testing as possible, so evaluating and implementing strategies for test-automation is an important aspect of the work.

At Videoplaza we practice Agile development with proper Scrum (or in some cases Kanban) with cross functional teams. We're constantly evaluating our processes, and ourselves, trying to find better ways of doing things and helping each other improve. We're absolutely convinced that in order to be really good at something, you need to truly enjoy doing it. We aim to create a fun workplace and believe that a great atmosphere plays an important role in bringing the very best out of every individual.

Who we're looking for

Most importantly, you should be an outstanding QA Engineer with a solid technical understanding as well as the ability to quickly understand new features and how to test them. You will be involved early in the specification process and you should be able to grasp abstract concepts and write test plans and test cases and later automate them. As we rely heavily on automation you must be familiar with scripting languages as well as setting up and configuring test-automation tools. Solid experience of UI testing of Flash, HTML5, Silverlight, iOS or Android applications is no doubt a bonus, but if you're the kind of person we're looking for, you'll be able to pick up new techniques and frameworks quickly and easily anyways.

Another thing we insist on is that you have a passion for what you do and a hunger for learning new things. We constantly evaluate ourselves and try to find better ways of doing things. We expect you to do the same and - just as important - help others improve as well.

All meetings and written communication at Videoplaza are in English. Swedish is not a requirement.
