

Title: Software Engineer  
Based in: Stockholm, Sweden

## Software Engineer, Stockholm

### Background

At Videoplaza, we build the next generation ad management platform dedicated to IP-delivered video. What we develop is a driving force behind the biggest shift in the consumption of moving images since television was invented. Our platform is used by clients all over the world to monetize video experiences across PCs, mobile devices, tablets, IPTV and Connected TVs. We now seek an experienced and skilled software engineer to join our team of exceptional developers and help us shape the New TV world.

### What do we do

Scaling our platform to handle tens of thousands of req/s with zero downtime, providing real time reports and forecasts based on billions of log rows and building a simple and intuitive UI that lets clients easily traffic their campaigns and maximize their sales; these are some of the complex challenges that make dev work at Videoplaza really interesting and rewarding.

To be able to do all this with limited resources we use the best frameworks and tools out there or, when they are not good enough, we write our own. Most of the code we write is in Java, but the platform is anything but your average JEE app.

### How we do it

At Videoplaza we practice Agile development with proper Scrum (or in some cases Kanban) and rely heavily on XP practices such as TDD, pair programming, code reviews and continuous integration. More importantly, we're constantly evaluating ourselves and our processes, trying to find better ways of doing things and helping each other improve. We're absolutely convinced that in order to be really good at something, you need to truly enjoy doing it. We aim to create a fun workplace and believe that a great atmosphere plays an important role in bringing the very best out of every individual.

As a Software Engineer you would join a scrum team working on new features and functionality in every layer of the product. Although you would likely spend most of the time developing components relevant to your expertise you will be exposed to and required to understand all parts of the system.

### Who we're looking for

Most importantly, you should be an outstanding software developer. We code mostly in Java and use frameworks and tools such as GWT, Guice, MongoDB, RESTEasy and Hibernate. Solid experience of one or more of these is no doubt a bonus, but if you're the kind of person we're looking for, you'll be able to pick up new languages and frameworks quickly and easily anyways.

Another thing we insist on is that you have a passion for what you do and a hunger for learning new things. We constantly evaluate ourselves and try to find better ways of doing things. We expect you to do the same and - just as important - help others improve as well.

All meetings and written communication at Videoplaza are in English. Swedish is not a requirement.

### Contact details

If you are interested, please send your CV and a short letter to [joachim@videoplaza.com](mailto:joachim@videoplaza.com) for more details.
